## General Notes

1. The GDP used in the calculation of ratios refer to the Current Market Prices of the respective Member States.
2. Calculations at the levels of CARICOM, MDCs, LDCs and OECS, exclude those countries for which data may not be available.
3. Unless otherwise stated, all graphs exclude data for the Bahamas.
4. The currency used is the Eastern Caribbean (EC) Dollar except for the Gross International Reserves table which was presented in United States (US) Dollars. In most cases the data were originally extracted in the National currency and were converted to the EC dollar for comparison purposes. (US\$1.00 = EC\$2.70)

## Symbols

## Preface

*This report started out simply as an attempt to make available for both internal and external users, key economic indicators of CARICOM Member States in a single publication.*

*As the report developed and the problems of compiling a consistent and reliable data set across all Member States were exposed, the publication grew into an attempt to bring to the fore the issues of harmonisation of statistics in the Region.*

*Harmonisation of statistics demands, or necessitates, that we have common data with harmonised or equivalent definitions that can be reliably compared across all Member States. With the creation of the CARICOM Single Market and Economy (CSME), the achievement of harmonisation of statistics is a crucial concern at the Regional and National levels. The monitoring of the performance of the CSME is only possible if there is a core set of statistics that are comparable and timely. Hence, the analysis in this report takes the form of a presentation of the conceptual framework of the data to assess the current status of the economic statistical system and to identify the gaps and deficiencies that can militate against the achievement of this goal of harmonisation of statistics in the CARICOM Region. In addition, a study of some of the trends highlighted may lead to the question of data reliability and accuracy, which may stimulate the need to re-examine the data at the source.*

*It is obvious that a lot more work is required, but this publication makes an initial effort to embark on the task of going deeper into the methodologies in use in the Region, and producing a core set of socio-economic, environment and eventually a set of sustainable development statistics indicators.*

*The lack of timeliness of submission of most of the data series may render some of the data to be outdated in the report. This was a major problem in the production of the publication.*

*The Statistics Sub-Programme welcomes any suggestions as to how the issues highlighted in the **Notes about the Data** can lead to an improvement of the quality, comparability and availability in general of these statistics in the Region.*

## **Acknowledgements**

*Data were collected from several sources during the preparation of this report.*

*The CARICOM Secretariat therefore, wishes to acknowledge and thank those Organisations and persons for their valuable contribution in supplying the data either by means of printed publications or through direct contact. Among these are the National Statistical Offices of Member States; the Central Banks of the Bahamas, Barbados, Belize, Guyana, Jamaica, Suriname and Trinidad and Tobago; the Eastern Caribbean Central Bank for data on the OECS countries; and the Caribbean Development Bank. The Secretariat looks forward to the continued support of these Organisations in making future editions of this report possible.*

*Sincere thanks and appreciation are also extended to the Staff of the Statistics Sub-Programme for compiling and preparing the report.*

## Notes about the Data

### *Gross Domestic Product*

Gross Domestic Product (GDP) at constant prices for Belize and Trinidad and Tobago were prepared at base year 2000. For the OECS and other Member States, GDP estimates at constant prices are at varying base years. In an effort to arrive at comparable data, the GDP of those Member States have been arithmetically recalculated from their respective base years to a 2000 base year.

This approach of deriving a common base year is a 'second best' method. Ideally, the best approach would be to use the detailed price and quantity measures at the individual country level to re-base the GDP at constant prices.

However, even with the base years standardised, the data at constant prices are still not totally comparable. The Bahamas and Trinidad and Tobago have prepared their constant GDP data at Market Prices; estimates for Jamaica are in Producers' Prices, Barbados' and Guyana's are at Factor Cost while the other countries' data are reportedly at constant Basic Prices.

At Current Prices, the data are all at Market Prices as presented in the GDP by Expenditure tables of each Member State.

Conversion of the data at current prices to Eastern Caribbean (EC) dollars for the non-OECS Member States generates the problem of annual changes at constant prices being larger than the corresponding changes at current prices for specific Member States. In addition, relative changes in current prices between Member States are affected by the uncoordinated movements between changes in exchange rates and prices. The case of Suriname is one of these Member

States where this phenomenon resulted in the lack of comparability of current price changes across Member States and current versus constant prices within country, in EC dollars. There were also differences in changes in current prices in EC dollars as compared to similar changes in National currency of the affected country.

### *Growth of Real GDP*

Growth rates were calculated as the annual change in the real GDP in Constant 2000 prices. However, since the shift in the base years was an arithmetic one, this would not have affected the growth rates when measured using the national base years.

### *Gross National Income*

GNI data were prepared in Market Prices for all Member States.

### *GDP Deflators*

Caution should be exercised when attempting to interpret the changes in the GDP deflators. Again, because some countries reported their constant GDP data in Basic Prices while others prepared theirs in Market Prices and Factor Cost, the changes at the CARICOM and MDC group levels and individual country levels for some countries are therefore not entirely comparable. At the LDC and OECS levels however, these changes can be somewhat compared since the source data were all in Basic Prices.

### *Consumer Price Index*

The data presented on Consumer Prices represent the inflation rates of Member States as measured by the percentage changes in the annual average CPI of the respective Member State. In the case of Barbados, the data

refer to the percentage change in the end of period CPI since this country re-based its CPI in 2001 resulting in a break in the series. However, it should be noted that the differences between the annual average changes and those of the end of year are not significant. Inflation rates for Guyana also refer to the end of period.

It should be noted that differences in the Consumer Price Indices exist across Member States relative to the base year of the indices, the composition of the basket of goods and the geographic area covered within countries.

In some instances, the price data reflect only one part of the country, for example, urban areas, or just one city. Due to the relatively small size/population of the countries, these changes are taken as being representative of the entire country. It may be the case however, that in rural areas, prices are higher and these are not reflected in the index.

In some Member States, the CPI is known as the Index of Retail Prices or the Cost of Living Index.

### *Unemployment Rates*

Labour Force data are compiled from surveys conducted by the Member States. Unfortunately, not all countries conduct regular surveys. In fact, for some countries, the only data on employment that are available are derived from population censuses.

There are differences in the reference periods among Member States for the measurement of economic activity. The size of the Labour Force will also depend on the time of the year when the survey was conducted, which implies that seasonality could affect the data. Some countries conduct quarterly surveys and in these cases the average of the four quarters was used for the annual figures.

In addition, some Member States use the population 15 years and over to measure economic activity while others use the 14 years and over age group.

## Concepts and Definitions

### *Real Gross Domestic Product*

The Gross Domestic Product (GDP) is the total market value of goods and services produced in the country within a given period of time, after deduction of the cost of goods and services used up in the process of production, but before deduction of allowances for the consumption of fixed capital. It is the sum of the gross value added by all resident and non-resident producers in the economy plus any taxes minus subsidies not included in the value of production.

### *Gross National Income Per Capita*

Gross Domestic Product plus net income from abroad equals the gross national income (GNI). GNI per capita is the total gross national income divided by the estimated total mid-year population.

### *GDP Implicit Price Deflator*

The GDP implicit price deflator is the ratio of the current over the constant prices expressed as a percentage. This is one measure of general price changes in the economy, taking into account changes in the prices of all the final demand categories such as government consumption, capital formation, international trade and private final consumption expenditure.

### *Consumer Price Index*

The Consumer Price Index (CPI) is a measure designed to monitor the changes in the prices prevailing in an economy based on a fixed basket of goods and services usually from one month to the next and sometimes based on a defined group of households or persons. It is a reflection of changes in prices as they affect the average consumer in the acquisition of goods and services.

### *Unemployment Rate*

The unemployment rate measures the total unemployed as a percentage of the total labour force during a defined reference period.

## Sources of Data

National Accounts data were compiled from data collected by the National Statistics Offices (NSOs) of the Member States.

Data on Prices were extracted from web sites and publications/bulletins prepared by the NSOs and/or Central Banks of the respective Member States.

Labour Force data came from a number of sources including NSOs' publications and web sites as well as reports from the 2000/2001 Round of Population and Housing Censuses.

## Notes about the Data

The data presented here give a broad indication of the structure of production of each CARICOM country and is measured as a percentage of the country's total GDP. As in the previous section, data for The Bahamas and Trinidad and Tobago are in Market Prices, Barbados and Guyana are at Factor Cost, while all the other countries are reported in Basic Prices with the exception of Jamaica. Jamaica's data are in current Purchasers' Prices.

Output by industrial origin is classified according to the International Standard Industrial Classification (ISIC). Member States have been using adaptations of either the ISIC revision 2 or 3. For the purpose of this report, **Agriculture** includes forestry, fishing and hunting while **Services** include construction, distribution, financial services, government services, hotels and restaurants, transportation and communication, personal and community services and other general services.

It should be noted that, the Utilities sector - electricity, gas and water; Imputed Service Charges/Financial Intermediary Services Indirectly Measured (FISIM) and Value Added Tax (VAT) are not accounted for in the data. As a result, the sum of the four major industrial sectors may not add to 100 per cent. In the case of Guyana, "electricity, gas and water" was included in the "other services" category and could not be disaggregated.

Data are also presented on the percentage contribution of the four broad industrial sectors of each Member State to CARICOM's overall GDP of the respective sector.

In both cases, these indicators would be affected by limitations concerning

exchange rate conversions as mentioned in the previous Section of this report.

## Concepts and Definitions

### *Value Added/Output*

Gross Output of industries is defined as the total value of all goods and services produced during the accounting period, adjusted for change in stock of work-in-progress and finished goods. Intermediate consumption consists of non-durable goods and services, which are used up in production. Value added at market prices is equal to the Gross Output at producers' prices less the value of intermediate consumption at purchasers' prices. The structure of production shows the breakdown of GDP through the contribution of agriculture, industry and services.

## Sources of Data

The structure of GDP was compiled from data collected by the National Statistics Offices of the Member States.

CARICOM - Gross National Savings and Gross Capital Formation: 2002-2006

LDCs - Gross National Savings and Gross Capital Formation: 2002-2006

**Notes about the Data**

Besides using the production method to generate GDP estimates, these estimates can also be produced using the expenditure approach. The data presented in this section were compiled from the Expenditure Tables of Member States as well as the Consolidated Accounts of the countries.

**Concepts and Definitions*****Gross National Savings***

Savings can be defined as disposable income which is not spent on consumption goods. That is, Disposable Income (National Income plus net transfers from the rest of the world) minus Final Consumption Expenditure (private plus government). The concept of Gross Domestic Savings differs from that of National Savings by not taking into consideration net factor payments from abroad (compensation to employees receivable from abroad and property income receivable from abroad) before subtracting final consumption expenditure.

***Gross Domestic Investment***

Gross Domestic Investment is gross fixed capital formation and increases in stocks. Gross fixed capital formation consists of outlays and additions to the fixed assets of the economy such as land improvement, plant, machinery and equipment and construction with respect to buildings, residential and commercial, roads, bridges, schools, private dwellings, etc.

**Sources of Data**

Compiled from National Accounts data collected by the National Statistics Offices of the Member States except in the case of the OECS countries. Data for these Member States were extracted from reports prepared by the Eastern Caribbean Central Bank (ECCB).

**Notes about the data**

Government Budgetary Operations are often based on a fiscal year, which may not always correspond with the calendar year. In order to 'fit' the data into calendar years, the data was put into the year for which the larger part of the data applied. For example, if the fiscal year ran from April 2002 to March 2003, then the data was placed in 2002. The Bahamas' fiscal year however, runs from July to June. In this case, the data was placed in the year containing the July to December data.

**Concepts and Definitions*****Government Current Revenue***

Current revenue of government consists of tax revenue and non-tax revenue but excludes capital receipts. Tax revenue covers taxes on income, profits, social security contributions, taxes on property, domestic taxes on goods and services, etc. Non-tax revenue consists of property income, and operating surpluses of departmental enterprises, receipts from public enterprises, voluntary unrequited non-repayable receipts other than from government, administrative fees and charges, fines, etc.

***Government Current Expenditure***

Current expenditure of government comprises expenditure on goods and services, interest payments and subsidies and other current transfers. It excludes capital expenditure.

***Government Capital Expenditure***

Capital expenditure comprises expenditure for the acquisition of land,

intangible assets, government stocks, and non-military and non-financial assets as well as capital grants and lending minus repayments.

***Overall Budget Deficit***

The overall government budget deficit is total revenue, current and capital and official grants less total expenditure and net lending (minus payments).

**Sources of Data**

The main sources for the Central Government data were the reports and web sites of the Central Banks of the Member States.
